

Quality compressed air where you need it, when you need it:

Hose reels

Hoses left lying around can pose a dangerous trip-hazard and can be easily damaged as a result of people and vehicles walking and driving over them.

These problems can be avoided however with the addition of an optional hose reel from KAESER. Available for every MOBILAIR portable compressor model, hose reels can be delivered pre-installed, or can be retrofitted at a later date.

The advantages speak for themselves:

Increased flexibility

Hose reel with 20 m of light hose for use even whilst unextended.

Maximum availability

Ready where and when you need it, the hose is just as easy to reel in as it is to use.

Longer service life

The hose reel provides effective protection against damage to the hose caused by kinks, stretching and crushing. Furthermore, the compressed air and air tools are not subjected to the contamination often associated with poor storage and careless transportation.
